

Thank you for your purchase.

## **“Remove Before Driving”**

After many requests for a one piece “pana-shade” for the one piece windshields we have created this kit.

The decision to produce the shade in kit form will allow you to install the suction cups in the proper placement for your particular windshield. It seems all one piece windshield shapes vary by manufacturer.

Our suggestion would be to start in the center and move to the outside. Trimming only after you are confident of the fit and placement of the suction cups. Install the suction cups in the finished hem along the top. Simply push an awl or an ice pick into the fabric to separate the weave 1” from the top of the shade, insert the plastic tack into the hole & press the tack into the suction cup. The suction cups can be adjusted if needed (twist the tack out of the suction cup and reinstall).

Our concern on the one piece shade is that it may be too large for some of our customers to comfortably install, therefore we suggest that before you trim, make sure you are comfortable with installing the large piece of material. If not, simply cut it into two pieces leaving an overlap in the center. Remember, it should be quick and easy; making sure you will use and enjoy the shade each time you stop.

The fabric does not ravel when trimmed. If you cut through the top stitching we would recommend a drop of glue or clear nail polish on the stitching to prevent it from pulling out.

## **Remember to remove before driving!**

This large kit may also be used in many areas around the home and patio, 5<sup>th</sup> wheel’s and park models. It can be split to use on several small windows as well.

Thank you again be cool and enjoy the views!
